

**REPORT ON**  
**STEM CELL DONATION**  
**ORGANIZED BY**  
**MAGAZINE COMMITTEE**  
**TECHNO INTERNATIONAL BATANAGAR**

Every-year Stem collection program is being conducted by **Magazine Committee** of **Techno International Batanagar** on 21st Feb. Stem cells are the foundation for every organ and tissue in the human body. Stem cells are a source of great hope for effective treatment of diseases or injuries that have previously been difficult to treat.

Stem cell treatment could be used to:

- Replace neurons damaged by spinal cord injury, stroke, Alzheimer's disease, Parkinson's disease or other neurological problems
- Produce insulin that could treat people with diabetes and heart muscle cells that could repair damage after a heart attack

It is great news for us that stem cell of our three donor students has been matched with requirement. These attachments show how this charitable and noble job is done by a Donner.

Dipankar Ghosh of Civil, 3<sup>rd</sup> Year, donating blood to collect stem cells
